

Experts Agree: **ELECTRONIC VOTING MACHINES CAN'T BE TRUSTED**

“All three voting systems have significant security and reliability vulnerabilities, which pose a real danger to the integrity of national, state, and local elections.”

--The William Brennan Institute, in a written report prepared by a task force of computer security experts including the head of security at Microsoft and Lawrence Livermore Labs, and expert computer professors from Yale, Berkeley, NYU, Stanford, and other Universities

“The election system, in its entirety, exhibits shortcomings with extremely serious consequences... These shortcomings merit urgent attention. Relying on this system in its present state should be viewed as a calculated risk...”

--Election Science Institute

“If we were another country being analyzed by America, we would conclude that this country is ripe for stealing elections and for fraud.”

--former chair of the Government's Election Assistance Commission (EAC)

“Don't trust Diebold voting machines.”

--USA Today, 10/2/06

“We know that both the Diebold optical-scan and touch-screen (DRE) machines have been proven to be vulnerable to tampering in test after test by industry experts, including a team of computer scientists and security experts convened by California's Secretary of State.”

--Democratic Party's website

“There is a serious flaw in the code that otherwise should protect the AV-TSx from memory card attacks”

-- Voting Systems Technology Assessment Advisory Board

“We're talking about a disaster here. Why is any election officer in the country taking a risk with these machines? This is like playing with nitro glycerine.”

--CNN's Lou Dobbs
